

CytoCentric Products

OxyCycler GT4181CN

CO and NO Subchamber Cell Culture System

- First Dual CO/NO
 Gasotransmitter Cell
 Culture System
- Precise Automated
 Exposures of CO and
 NO
- Dynamic or Static Exposures
- Simulate Physiologic and Pathophysiologic conditions
- Unprecedented CO Induced Phenotypes
- Unprecedented NO Induced Phenotypes

The GT series all use the same multipod adapter plate. This attaches to a C-Chamber and sits within your incubator.

0-400ppm CO and 0-50ppm NO

ADVANCED GASOTRANSMITTER INCUBATION

Carbon monoxide and nitric oxide are both important gasotransmitters with a wide variety of similar, overlapping, and different functions. Now it is possible to study them independently or simultaneously in cell culture without the difficulty of chemical donors. The OxyCycler GT4181CN is the only dual gasotransmitter cell culture system providing control of both CO and NO. It creates the ultimate incubator accessory when controlling CO and/or NO in a subchamber culture system.

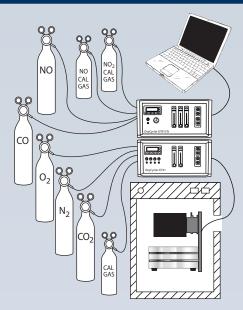

UNLIMITED PROGRAMMED, DYNAMIC EXPOSURES

Consisting of a GT41 which provides the common O_2 , CO_2 , and RH control, and the modular GT81CN piggyback controller, which provides not only the CO and NO range control but also NO_2 limiting, the combo can create virtually any type of dynamic or static exposure your cells might need.

MODULAR FLEXIBILITY

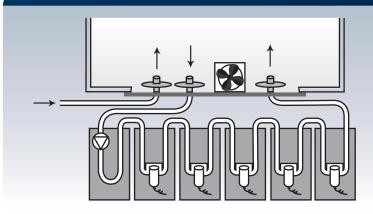

The controller is compatible and will fit any standard size C-Chamber. The entire system will fit any existing incubator.

Installation Schematic

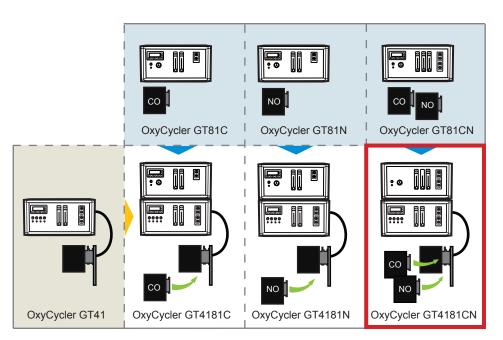

OxyCycler GT4181CN Culture System. Controls dynamic or static O_2 , CO_2 , CO and NO, and limits RH and NO_2 in subchamber. Supply gases to GT41 required: Oxygen, Nitrogen, Carbon Dioxide. Calibration gas to GT41 required: certified pre-mix of 10% CO_2 in balance oxygen. Supply gases to GT81CN: non-certified pre-mix of 10000ppm CO in balance nitrogen, and non-certified pre-mix of 1000ppm CO in balance nitrogen. Calibration gases to GT81CN required: certified pre-mix of 300ppm CO in balance nitrogen, certified pre-mix of 30ppm CO in balance nitrogen, and certified pre-mix 10ppm CO in balance nitrogen.

How It Works

Hot swap multipod adapter plate provides microbial barrier filters between cells culturing in the subchamber and all of the sensors and mechanisms that control O₂, CO₂, RH, CO, NO/NO₂ and temperature. Hot swap multipods provide upgrade flexibility and immediate, easy maintenance. A pump draws a sample from the controlled atmosphere and passes by all sensors and returns to chamber through disposable microbial barrier filters. Appropriate gases are infused as necessary by controllers through terminal, microbial barrier filters. Small fan homogenizes gases throughout chamber and can be easily removed, sterilized and replaced.

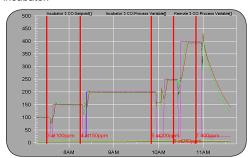

Configuration

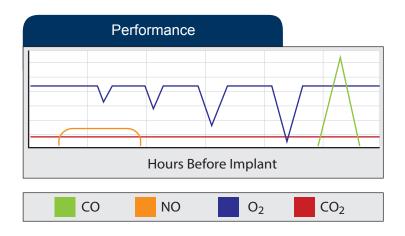

The OxyCycler GT4181CN is a combination controller consisting of a GT41 mother controller and the GT81CN piggyback controller working in tandem. It is the ultimate for CO and NO gasotransmitter research. The GT41 controls core $\rm O_2$ and $\rm CO_2$ levels in dynamic or static states and limits RH, while the GT81CN controls 0-400 ppm CO in dynamic or static exposures, and 0-40 ppm NO in dynamic or static exposures, while limiting $\rm NO_2$ from accumulating past critical levels.

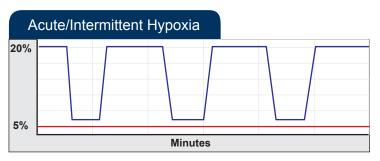

Controller sits outside the incubator and umbilicals extend through port hole on the incubator and connect to Hot Swap Minipod Assembly inside the incubator.

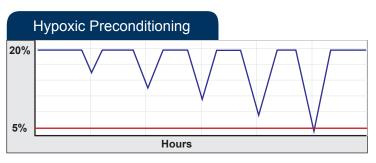

Operated by a computer and powerful software allows user to program any type of exposure with all variables and repeat those exposures with the click of a mouse. Profiles can be created, stored and recorded 24 hrs a day/7 days a week.

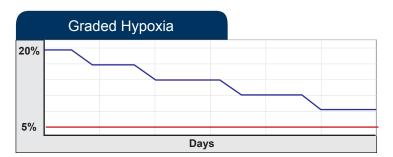

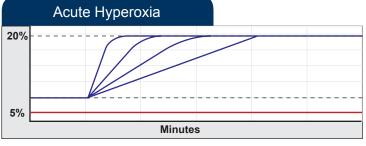

Hypoxic stress can model components of many severe diseases such as heart attacks, strokes, asthma, or epilepsy. Frequency, duration and degree of drops are all adjustable.

Cells destined for implantation will experience hypoxia and may be better prepared if they are conditioned to it before implantation. Ischemia may also be protected by conditioning. The OxyCycler GT4181CN can easily run any preconditioning profile.

Model step reduction in oxygen, similar to altitude acclimation, to gradually condition cells for hypoxic upregulation of gene expression. The rate of change between any two levels is adjustable and repeatable. The duration at any given level is adjustable and repeatable.

Sudden increases in oxygen can cause cell damage. The OxyCycler GT4181CN allows modeling toxicity of oxygen in any cell culture, similar to toxicity from recreational oxygen inhalation by athletes, therapeutic oxygen administration in critical care units, and other sudden exposures to high oxygen. The rate of oxygen increase can be adjusted to change faster to overwhelm antioxidants, or change slower to condition for antioxidants.

Safety

SAFETY: Gasotransmitter culture systems can release small amounts of CO, NO, and NO₂. Safety procedures must be followed on multiple levels. First, gas tanks should be located in a well-ventilated room. Second, gas mixtures should be ordered that will not exceed OSHA danger levels (PEL) under worst case scenario (full tank release into the room). Third, all hoses and connections should be double checked for leak-free operation. Fourth, minimize gasotransmitter control setpoints and duration. Fifth, before opening gasotransmitter culture chamber (sub chamber) set gasotransmitter control level to zero and wait until setpoint is reached. Under these conditions, only a small amount of gasotransmitter will leak out of subchamber into host incubator. Subsequently, an even smaller amount will leak out of incubator into the room. Dilution in room should never approach danger levels. OxyCycler GT4181 controllers all have ambient room safety sensors. Optional I-Hood incubator safety hood can sweep any gasotransmitter exhausted from incubator directly to a fume hood (shown in picture to left).

Ambient gasotransmitter sensors can be placed in the room to monitor room levels of gasotransmitter exposures. Alarms can be set to notify of unexpected high gasotransmitter concentrations. These safety sensors are not certified gas safety

equipment. In addition, third party certified gas safety monitors may be desired. This picture shows ambient room monitor sensors for the OxyCycler GT4181CN and monitors and logs CO, NO and NO2.

Specs

ELECTRICAL POWER: 12 VDC at 6.66A (Power Supply Specifications), Expected current draw around 3.7A.

CONTROL RANGE: O_2 : 0.1-99.9%, CO_2 : 0.1-20.0%, CO: 0-400 PPM, NO: 0-50 PPM

ACCURACY: O $_2$: $\pm 1\%$ at constant temperature/pressure, $\pm 2\%$ over entire temperature range. CO $_2$: $\pm 5\%$ of measurement or 0.1% CO $_2$. Temperature: ± 0.6 °C. Relative Humidity: $\pm 3\%$ RH between 0-40°C. CO: varies based on calibration for customer protocol. NO: varies based on calibration for customer protocol

CARBON DIOXIDE SENSOR: Infrared sensing

CARBON MONOXIDE SENSOR: Electro-galvanic fuel cell

NITRIC OXIDE SENSOR: Electro-galvanic fuel cell

NITROGEN DIOXIDE SENSOR: Electro-galvanic fuel cell

GAS SOURCE: Compressed gas tanks, liquid carboys (from headspace) or generators

GAS SUPPLY: Pressurized O_2 , CO_2 , N_2 , O_2/CO_2 SPAN mix, CO, CO SPAN mix, NO, NO SPAN mix. Customer should consider protocol when ordering SPAN gases. Appropriate CO/NO volume and concentration to be determined by lab safety officer.

GAS SUPPLY LINE PRESSURE: 0-25 PSIG

GAS INFUSION RATE:

GAS CONSUMPTION: Depends on (1) size and leakiness of host chamber, (2) frequency and duration of opening chamber doors and (3) gas level controlled

UMBILICAL LENGTH: 12 ft

UMBILICAL DIAMETER: 1/16" ID SENSOR CABLE LENGTH: 12 ft

SENSOR CABLE DIAMETER: 6mm

ALARM OUTPUT: Global Alarm Output and Audible, External Alarm system

ALARM MODES: Process High, Process Low, Deviation High, Deviation Low, Deviation Band

WEIGHT: 22 Lbs

CONTROLLER DIMENSIONS: 9"H, 17"W, 15"D

REMOTE MONITOR POD DIMENSIONS: 4.25"H, 7.0625"W, 4.25"D

Sensor Operational Parameters

HOST CHAMBER TEMPERATURE: 5-40°C

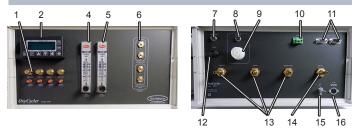

HOST CHAMBER HUMIDITY: 15-90%, Non-Condensing

Front and Back Panels

GT81CN

3T41

- Bleed Valves and Barbs: Bleeds gases out of gas supply lines. Calibration cup for sensor attaches here.
- **2. Controller:** Bright blue digits on black back ground. Continuously displays current control gas level, control status, and alarm status in all chambers. Displays menu items and settings during programming.
- 3. Alarm: Will sound if Ambient gas monitor detects unsafe levels.
- 4. ZERO Calibration Gas Flowmeter: Used for calibration.
- 5. SPAN Calibration Gas Flowmeter: Used for calibration.
- **6. Needle Valves:** Sets infusion rate of control gases in each chamber to accommodate different dynamics. Can manually override controller to shut off gas.
- 7. Accessory Receptacle: 10 Pin Receptacle is for connecting optional accessory units.
- **8. Communications Cable Jack:** This cable relays information for the sensors.
- **9. Monitor Pod Umbilical:** Flexible umbilical connects remote monitor pod to back panel. Semi-swivel connectors at both ends allow 360° orientation. Some models are hard welded; function is the same.
- 10. Alarm Receptacle: Connect an appropriate alarm to this jack.
- **11. RS 485 Connections:** One cable attaches to a computer and the other cable attaches to another unit, to allow communication with the computer (if applicable).
- **12. Pump Connection:** This 3 pin receptacle supplies power to the Mini Pod Pump.
- **13.** Supply Gas Hose Barb: Barbs for 1/4 inch I.D. hose from gas sources. Handles pressure up to 40 PSIG.
- 14. Span Mix Barb: Barb for 1/4 inch I.D. hose from gas source.
- 15. Ground Stud: For grounding the unit to protect from electric damage.
- 16. Power Receptacle: 12VDC power supply connects here.
- **17. Monitor Pod Umbilical:** Flexible umbilical connects remote monitor pod to back panel. Semi-swivel connectors at both ends allow 360° orientation. Some models are hard welded; function is the same.
